

Problem Background

- 1 Gap between open source conversational data and real user chat behavior

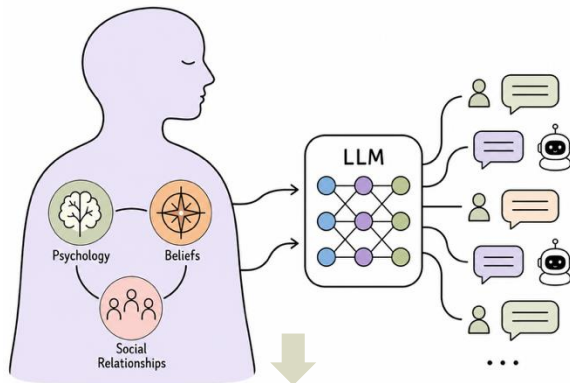

- 2 Synthetic persona prompting: static & shallow

Leads to poor personalization, long-horizon understanding and weak theory of mind reasoning

Mind2Dialogue-Sim

- ▶ State-aware simulation
- ▶ Real user behavior grounded

😊 Better intention inference Stronger theory-of-mind reasoning

Mind2Dialogue-Corpus

High-fidelity personalized conversations

I've been feeling really burned out lately.

How long has this been going on, and what's causing the most stress?

A few months. Mostly deadlines and meetings.

You tend to overwork. Want me to adjust your schedule again?

Data: Public

Scalability: High

User Model: Ground Truth
